Visible display boundary

30 mm safe zone

SAFE ZONE: 790 x 1940 mm - KEEP IMPORTANT CONTENT INSIDE AQUA DASHED LINE

PERFORMANCE Standard Roller Banner

Visible display size: 850 x 2000 mm

Complete document

870 x 2110 mm

Visible display area

850 x 2000 mm

Safe zone

790 x 1940 mm

External bleed

10 mm at the top, left and right

Bottom continuation

100 mm continued background artwork

Artwork preparation

- Extend all background colours and images to every outside edge of the document.
- Keep text, logos, faces and other important content inside the aqua safe zone.
- Continue the background image through the complete 100 mm bottom extension.
- Do not place important content in the bottom extension because it retracts into the base.
- Remove the template guides before exporting your final print-ready artwork.
- Preferred format: print-quality PDF. Embed all images and fonts, or convert fonts to outlines.
- Image quality: 150 DPI at final document size is recommended for photographic artwork.
- Colour: use CMYK where supported. RGB is accepted when the artwork is one photographic image.
- JPG: one flattened image only, supplied full size at maximum quality.

Important

The bottom continuation behaves like bleed. It prevents a visible white edge near the base when the banner is installed and fully extended.
